2007-11 American Community Survey Data

The US Census Bureau recently released the 2007-11 American Community Survey data. Unlike the 1- and 3-year estimates, available for geographies with populations of at least 65,000 and 20,000 respectively, the 5-year estimate data are available for geographies down to the block group, permitting comparability among municipalities.

The Census Bureau publishes both the estimate and the margin of error for ACS data. They are included here for reference. The 5-year ACS data has generally smaller margins of error than the 1- or 3-year data, but in some instances they can still be larger than the estimate itself.

CDRPC recommends using the 5-year ACS data due to the expanded geographic availability and the greater reliability.

CDRPC publishes selected tables from the ACS Demographic Profiles in its Community Fact Sheets. The preceding tables are a sample of what is available within the Fact Sheets. The 8-page Community Fact Sheets for the Region's municipalities can be found on CDRPC's website: <http://cdrpc.org/CFS.html>

Please Note: The Census Bureau strongly advises against comparing successive multi-year ACS estimates as they are based (in this instance) on a five-year moving average. The 2007-11 ACS data should only properly be compared to ACS data published five years later (i.e., the 2012-2016 ACS). For more information on the ACS, including additional resources, visit: <http://cdrpc.org/ACS.html>
